AIM

To design and build a functional “Hotel Room Booking Form” application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox — while solving a real hospitality-industry requirement of collecting and pre-processing room booking requests, and to model the underlying data structure through a properly sectioned form and an auto-generated report view.

PROBLEM STATEMENT

A budget hotel currently accepts room bookings through phone calls and third-party messaging apps, resulting in double bookings, missed special requests, and no structured way to know guest count, room preferences, or arrival schedule in advance. The front desk has no digital record until the guest actually checks in. The application allows a guest to submit a room booking request through a single online form that captures guest identity, contact details, identification details, room and stay preferences, amenities required, and acknowledgement of hotel policies — using every Basic Field type provided by Zoho Creator's Form Builder.

Application Name	Hotel Room Booking & Front Office Management
Form Name	Room_Booking_Form
Primary Users	Guests / Hotel Front Office staff
Report View	Room_Booking_Report (list of all submitted booking requests)

PROCEDURE

1. Data Model Design

Before building the form, the data requirement was analysed and organised into a simple data model, grouping the thirteen Basic Fields under four logical sections that map to the stages of a guest's booking journey: Guest Details, Contact Details, Room and Stay Preferences, and Scheduling & Policy Acknowledgement. Every field submitted through the form flows into a single auto-generated report, Room_Booking_Report, which the front office uses to track and manage bookings. The resulting data model is shown below.

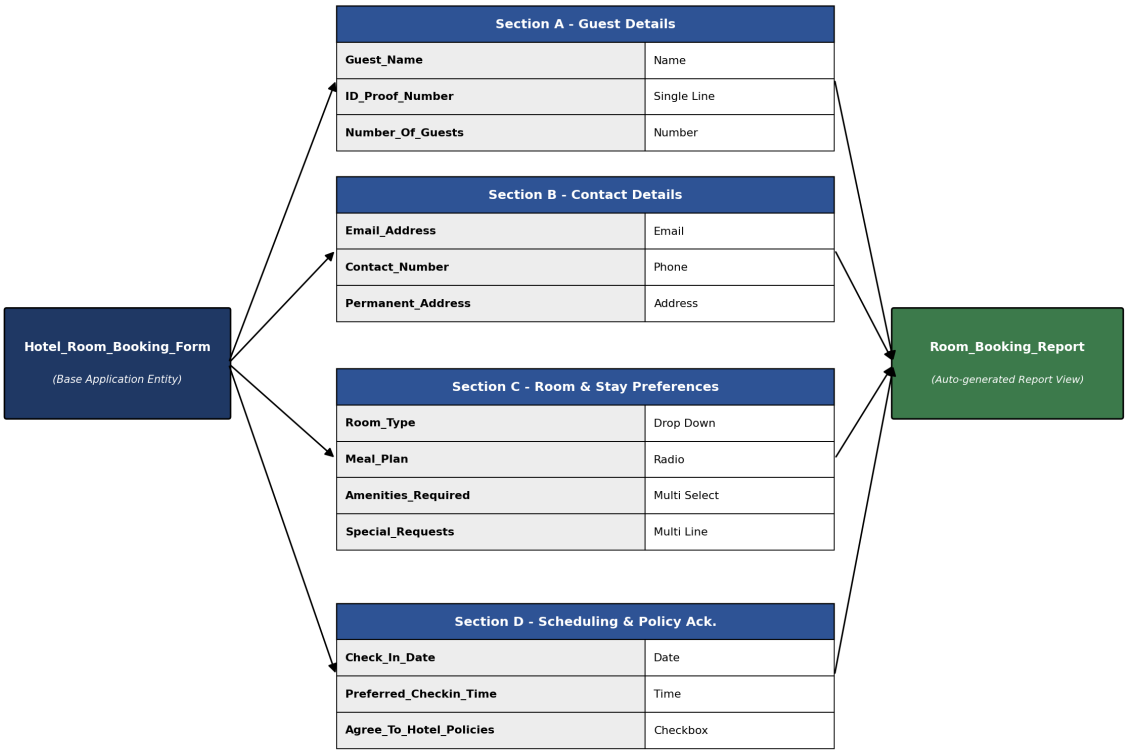

Fig 1. Data Model — Room_Booking_Form and its sectioned fields feeding Room_Booking_Report

2. Application and Form Creation

• Logged into Zoho Creator and clicked **Create New Application** → **Create from Scratch**.

• Named the application “Hotel Room Booking & Front Office Management” and confirmed creation, which opened the default blank workspace.

• Inside the application, opened the Forms panel and clicked the + icon to add a new form, naming it **Room_Booking_Form**.

• This automatically created a linked report, **Room_Booking_Report**, which lists every submitted booking request.

3. Basic Fields Used and Their Mapping

Each required Basic Field was dragged from the Form Builder palette onto the canvas and configured with the appropriate field name, section, and sample value, as summarised below.

Basic Field	Form Field Name	Purpose	Sample Value
Name	Guest_Name	Captures the full name of the guest using First/Last name sub-fields	Roshan K
Email	Email_Address	Captures a validated email address for sending the booking confirmation	roshan.k.2024.csbs@rajalakshmi.edu.in
Address	Permanent_Address	Captures the guest's permanent residential address for records and billing	2/8 KK Kovil Street, Chennai, Tamil Nadu, 600031, India
Phone	Contact_Number	Captures a validated mobile number for the front desk to confirm and coordinate the booking	+91 73583 09063
Single Line	ID_Proof_Number	Captures a short free-text entry for the guest's identification document number	241401083
Multi Line	Special_Requests	Captures free-text remarks for any special requirements during the stay	Not needed

Basic Field	Form Field Name	Purpose	Sample Value
Number	Number_Of_Guests	Captures a numeric value with validation for the total number of guests staying	2
Date	Check_In_Date	Captures the guest's intended check-in date using a date picker	20-Aug-2026
Time	Preferred_Checkin_Time	Captures the guest's expected arrival time at the hotel	5:06 PM
Drop Down	Room_Type	Presents a single-select list of room categories available at the hotel	Deluxe
Radio	Meal_Plan	Captures a single mandatory selection among mutually exclusive meal plan options	All Meals Included
Multi Select	Amenities_Required	Allows selection of one or more additional amenities requested for the stay	Mini Bar, AC, Spa Access, Room Service
Checkbox	Agree_To_Hotel_Policies	Captures the guest's acknowledgement of the hotel's check-in/check-out and cancellation policies	Checked (Agreed)

4. Form Layout (Section-wise)

• **Section A — Guest Details:** Guest Name, ID Proof Number, Number of Guests.

• **Section B — Contact Details:** Email Address, Contact Number, Permanent Address.

• **Section C — Room & Stay Preferences:** Room Type, Meal Plan, Amenities Required, Special Requests.

• **Section D — Scheduling & Policy Acknowledgement:** Check-In Date, Preferred Check-in Time, Agree to Hotel Policies.

5. Validation Rules Configured

• Guest Name, Phone, ID Proof Number, Number of Guests, Room Type, Check-In Date, and Policy Checkbox were set as mandatory fields.

• Email field: built-in email format validation enabled.

• Phone field: country code format enabled for Indian numbers (+91).

• Number field (Number of Guests): value range restricted from 1 to 6 per room.

• Date field: Check-In Date restricted to disallow past dates.

• Checkbox (Hotel Policies): the Submit button remains disabled until the checkbox is checked.

6. Preview, Submission and Deployment

• Clicked the Preview icon in the Form Builder toolbar to view the live guest-facing form and verified that all four sections render in order with the correct field types.

• Filled and submitted sample bookings through the preview/live form to test validations and generate report data.

• Opened Room_Booking_Report from the Reports panel and verified that submitted records appear with values mapped correctly to each field.

• The front office can filter the report by Room Type and Check-In Date to confirm availability and prepare rooms ahead of the guest's Preferred Check-in Time.

OUTPUT

The following screenshots capture the completed application: the live guest-facing form with all sections filled in, and the Room_Booking_Report containing the submitted booking record.

1. Live Form Preview — Guest & Contact Details

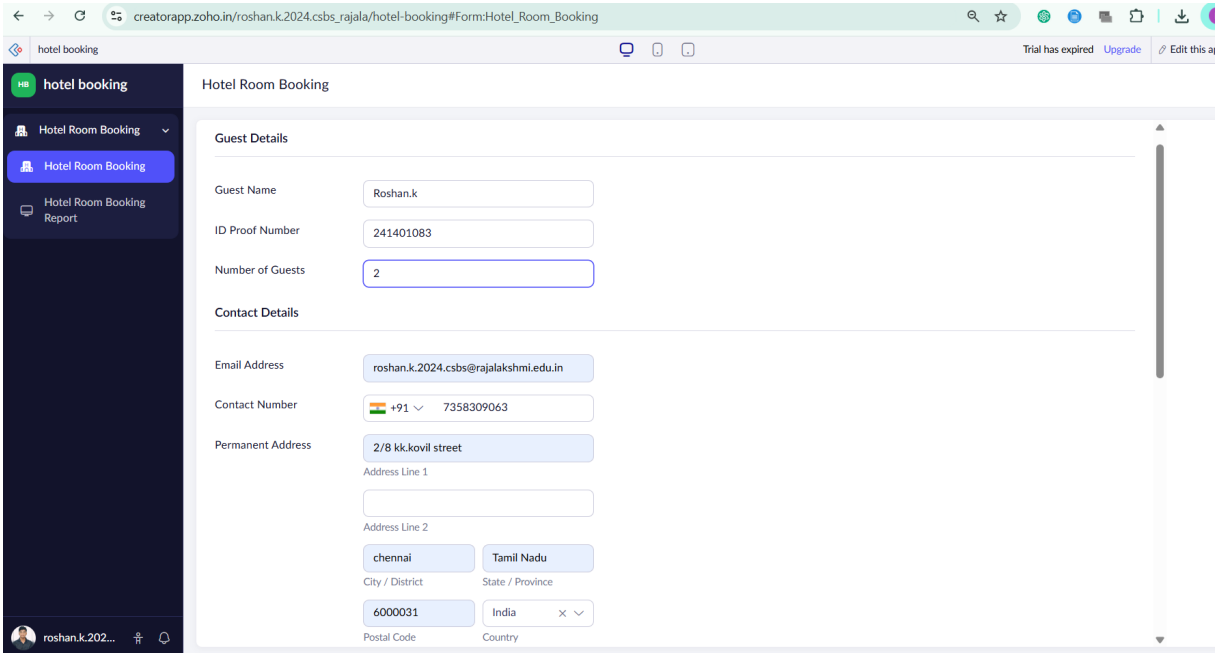

Fig 2. Room Booking form — Guest Details and Contact Details sections filled in

2. Live Form Preview — Room, Stay & Policy Acknowledgement

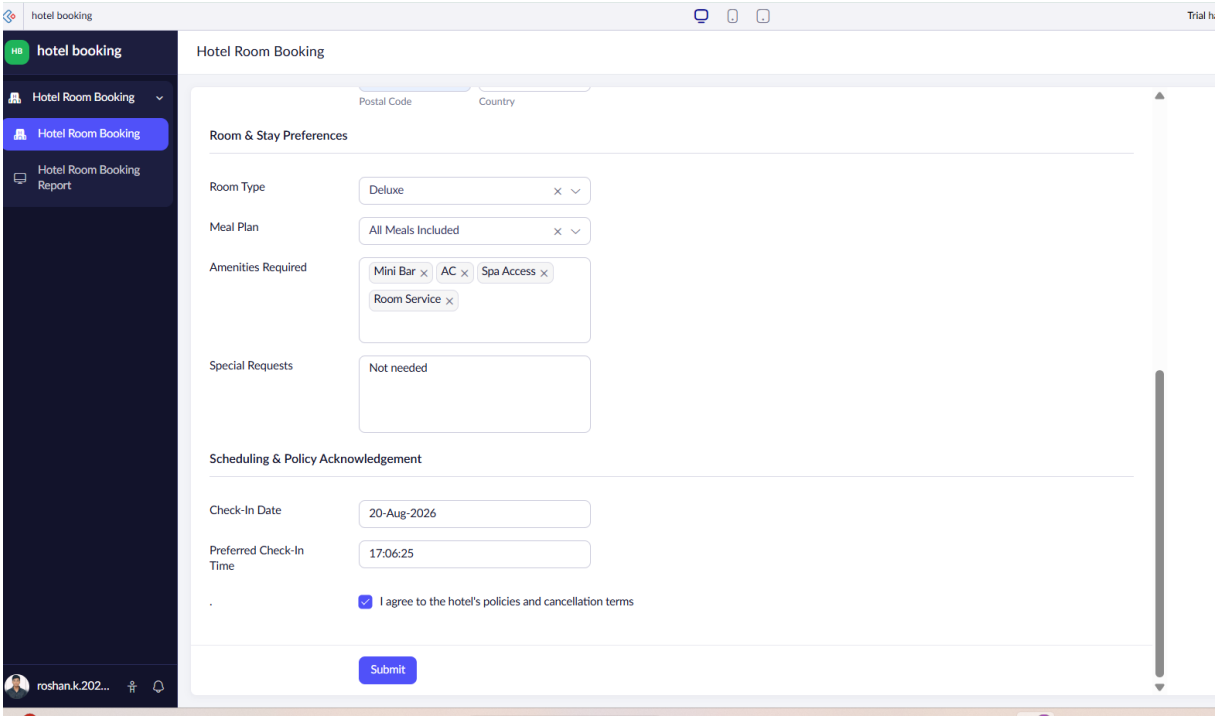

Fig 3. Room Booking form — Room & Stay Preferences and Scheduling & Policy Acknowledgement sections

3. Room_Booking_Report — Submitted Records

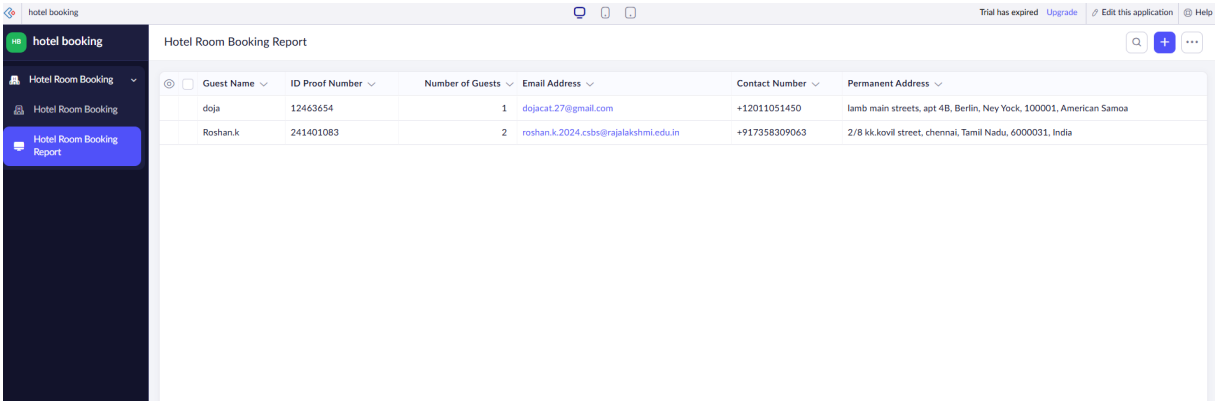

Fig 4. Room_Booking_Report showing submitted booking records

RESULT

A Hotel Room Booking Form application was successfully designed and built in Zoho Creator using all thirteen Basic Fields — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox. The fields were logically grouped into four sections, mandatory and format-level validations were configured successfully, and the Room_Booking_Report was verified to correctly capture and list guest booking data submitted through the form. The exercise thus demonstrated an understanding of data modelling and low-code form design for a real hospitality business use case.
